POWDER ADDITIVE

THIXX ADDITIVE – ADVANCED RHEOLOGY MODIFIER FOR THE INFINITY SYSTEM

Developed alongside our next-generation v product range, THIXX Additive is a high-performance rheology and viscosity enhancer designed to improve body, control flow, and enable trowelable or vertical application across multiple Infinity coatings. THIXX can be incorporated at 1–5% of total product weight, with the exact dosage dependent on the Infinity system you are working with and the effect required.

USED TO GIVE PRODUCTS A THIXOTROPIC EFFECT

USED A THICKENING GEL FOR RESIN

THIXX IS FULLY COMPATIBLE WITH THE FOLLOWING INFINITY SYSTEMS:

INFINITY SPRAY GRANITE

ADDITION RATE:

Use 1–2% of total weight. Mix gently to avoid fracturing the granite spheres, as this may cause smudging in the final finish. THIXX allows Spray Granite to be trowelled and manipulated, enabling marbling effects and enhanced texture during the curing phase.

INFINITY SPRAY STONE

ADDITION RATE:

Use 2–4%, depending on stone grade and application technique. This provides additional body and stability, allowing the coating to be trowelled for a smoother, flatter stone finish.

INFINITY ROX BINDER

ADDITION RATE:

Use 6–7% of total kit weight. This enables vertical trowelling of resin-bound ROX mixtures, allowing installers to build seamless wall applications with improved cohesion and reduced slump.

Please note: incorporating THIXX will reduce working time, as the increased body retains more heat and accelerates the cure. Before use, consult your Infinity representative to confirm correct dosage and suitability for your specific application.

KEY BENEFITS

- Enables Trowellable & Vertical Application
- Improves Body & Viscosity
- Enhances Stability & Control
- Reduces Slump & Extends Workability
- Eco Friendly Formulation

PRODUCT INFORMATION

Type	One Pack Powder
Mix ratio	Consult Infinity Representative
Pack Sizes	1KG, 5KG
Colour	Dust Transulence White
Shelf Life & Storage	6 months in original, unopened container. Store in cool, dry conditions
